ROLL NO: 21BCE098

COURSE CODE: DSA (2CS301)

INNOVATIVE ASSIGNMENT

MUSIC BOX

ABOUT: This project is a programming assignment in C which builds a music-album based on the user's preferences. This program will let the user add, remove, update his/her music albums in his/her music-box. In this project we used Binary Search Trees for implementation.

The data that we have used is as detailed below:

1. The album title.
2. The year the album was released.
3. The name of the singer of the album.
4. A list of the songs in the album.

For each song in the album, data we have kept is:

- The name of the song
- The length (seconds) of the song.

Our program have the following functionalities:

1. Add an album.
2. Remove an album.
3. Show the list of albums.
4. Show detailed information about a particular album.
5. Add a song to the song list of an album.
6. Remove a song from the song list of an album.
7. Show the list of all songs.
8. Query the albums which are/were released between particular years.
9. Query the songs whose lengths are in a particular scope.
10. Exit.

CODE PART:

```
/*  
    implementation of binary search trees;  
*/  
  
// structure of nodes having song data;
